Falsettos William Finn, James Lapine, 1995 A seamless pairing of *March of the Falsettos* and *Falsettoland*, acclaimed off Broadway musicals written nearly a decade apart. Two years later, Marvin is reunited with his lover on the eve of his son's bar mitzvah, just as AIDS is beginning its insidious spread--Publisher

The Exphoria Code Antony Johnston, 2020-10-06 Award-winning and bestselling author Antony Johnston introduces a major new techno-thriller series featuring an MI6 cyber-espionage specialist. Brigitte Sharp is a brilliant but haunted young MI6 hacker who has been deskbound and in therapy for three years after her first field mission in Syria went disastrously wrong. Despite her boss's encouragement, Bridge isn't ready to go back in the field. But now one of her best friends has been murdered, and Bridge believes his death is connected to strange "ASCII art" posts appearing on the internet that carry encrypted hidden messages. On decoding the messages, she discovers evidence of a mole inside a top-secret Anglo-French military drone project—an

enemy who may also be her friend's killer. Her MI6 bosses force her back into the field, sending her undercover in France to find and expose the mole. But the truth behind the Exphoria code is worse than anyone imagined, and soon Bridge is on the run, desperate and alone, as a terrorist plot unfolds and threatens everything she has left to live for. Drawing on cutting edge technology and modern global threats, Brigitte Sharp is a highly credible female spy in a truly original and contemporary story.

Changing Geopolitics of Global Communication Daya Thussu, 2024-07-31 *Changing Geopolitics of Global Communication* examines the rapidly evolving dynamics between global communication and geopolitics. As an intersection between communication and international relations, it bridges the existing gap in scholarship and highlights the growing importance of digital communication in legitimizing and promoting the geopolitical and economic goals of leading powers. One central theme that emerges in the book is the continuity of asymmetries in power relations that can be traced back to 19th-century European imperialism, manifested in its various incarnations from 'liberal' to 'neo-liberal', to 'digital' imperialism. The book includes a discussion of the post-Cold War US-led transformation of the hardware and software of global communication and how it has been challenged by the 'rise of the rest', especially China. Other key issues covered include the geopolitics of image wars, weaponization of information and the visibility of discourses emanating from outside the Euro-Atlantic zone. The ideas and arguments advanced here privilege a reading of geopolitical processes and examples from the perspective of the global South. Written by a leading scholar of global communication, this comprehensive and transdisciplinary study adopts a holistic approach and will be of interest to the global community of scholars, researchers and commentators in communication and international relations, among other fields.

Extraterrestrial Ethics Jensine Andresen, 2023-11-25

This unique book takes both inductive and deductive approaches to the topic of extraterrestrial ethics. Inductively, it asks what kind of ethics an advanced, intelligent extraterrestrial species might display. Deductively, it asks how human beings should transform their own understanding of ethics to prepare for widespread contact with an advanced extraterrestrial species. Using the ontological interpretation of quantum mechanics proposed by physicist and philosopher David Bohm, *Extraterrestrial Ethics* considers how an extraterrestrial intelligence (ETI) may view ethical concerns relating to humankind. The book examines two areas of concern: nuclear technologies; and the militarization and weaponization of space. The text of the Fiscal Year 2022 National Defense Authorization Act (FY22 NDAA) in the United States clearly states that Unidentified Aerial Phenomena (UAP) have been reported at sites associated with nuclear weapons, nuclear-powered ships and submarines, nuclear power generating stations, etc., suggesting that ETI is very concerned about the human use of nuclear technologies. Furthermore, the more ubiquitous level of UAP sightings by the U.S. military over the last few years, as documented in the June 2021 report from the Office of the Director of National Intelligence (ODNI) in the U.S., suggest that ETI also is concerned about rapid acceleration relating to the militarization and weaponization of space. The book concludes by advocating a normative approach to demilitarize space.

New Cold Wars David E. Sanger, 2024-04-16 NEW YORK TIMES BESTSELLER • The fast-paced inside story of

America's plunge into a volatile rivalry with the other two great nuclear powers—Xi Jinping's China and Vladimir Putin's Russia—from the Pulitzer Prize-winning journalist and bestselling author of *The Perfect Weapon* “[A] cogent, revealing account of how a generation of American officials have grappled with dangerous developments in the post-Cold War era . . . vividly captures Washington.”—*The New York Times* (Editors' Choice) *New Cold Wars*—the latest from the Pulitzer Prize-winning journalist and bestselling author of *The Perfect Weapon* David E. Sanger—is a fast-paced account of America's plunge into simultaneous confrontations with two very different adversaries. For years, the United States was confident that the newly democratic Russia and increasingly wealthy China could be lured into a Western-led order that promised prosperity and relative peace—so long as they agreed to Washington's terms. By the time America emerged from the age of terrorism, it was clear that this had been a fantasy. Now the three powers are engaged in a high-stakes struggle for military, economic, political, and technological supremacy, with nations around the world pressured to take sides. Yet all three are discovering that they are maneuvering for influence in a far more turbulent world than they imagined. Based on a remarkable array of interviews with top officials from five presidential administrations, U.S. intelligence agencies, foreign governments, and tech companies, Sanger unfolds a riveting narrative spun around the era's critical questions: Will the mistakes Putin made in his invasion of Ukraine prove his undoing and will he reach for his nuclear arsenal—or will the West's famously short attention span signal Kyiv's doom?

Will Xi invade Taiwan? Will both men deepen their partnership to undercut America's dominance? And can a politically dysfunctional America still lead the world? Taking readers from the battlefields of Ukraine—where trench warfare and cyberwarfare are interwoven—to the Taiwan headquarters where the world's most advanced computer chips are produced and on to tense debates in the White House Situation Room, *New Cold Wars* is a remarkable first-draft history chronicling America's return to superpower conflict, the choices that lie ahead, and what is at stake for the United States and the world.

Design and Modeling of Mechanical Systems - VI
Mnaouar Chouchane,

The Story of Drawing Susan Owens, 2024-09-10 Drawing is at the heart of human creativity. The most democratic form of art-making, it requires nothing more than a plain surface and a stub of pencil, a piece of chalk or an inky brush. Our prehistoric ancestors drew with natural pigments on the walls of caves, and every subsequent culture has practised drawing - whether on papyrus, parchment or paper. Artists throughout history have used drawing as part of the creative process. While painting and sculpture have been shaped heavily by money and influence, drawing has always offered extraordinary creative latitude. Here we see the artist at his or her most unguarded. Susan Owens offers a glimpse over artists' shoulders - from Michelangelo, Rembrandt and Hokusai to Van Gogh, Käthe Kollwitz and Yayoi Kusama - as they work, think and innovate, as they scrutinise the world around them or escape into their imaginations. *The Story of Drawing* loops around the

established history of art, sometimes staying close, at other times diving into exhilarating and altogether less familiar territory.

Chemometrics Fabiano André Narciso Fernandes, Sueli Rodrigues, Elenilson Godoy Alves Filho, 2024-06-26 *Chemometrics: Data Treatment and Applications* demonstrates the best practices for treating real-world analytical instrument data and how to apply chemometrics to this data. Rather than focusing on the mathematical theory involved in chemometrics, this book is meant for the industrial chemist, and academics and advanced students that want to use chemometrics in practice. Case studies on several applications are presented. Unlike existing literature, this book focuses on best practices, practical realities, and challenges when treating data, rather than on the mathematical theory. It also provides basic information on chemometrics, several chapters on how to treat, and the best practices used to treat, data from different analytical instruments, as well as case studies and uses of chemometrics in different fields. The book is written primarily for analytic chemists as practitioners in analytical laboratories and other industries. It will also be useful to academics and graduate, masters and postdoc students chiefly working in analytical chemistry who want to improve the practical aspects of their research activities. - Presents topical and important chapters for the most-used analytical instruments - Focuses on practical issues in the implementation of chemometrics - Examines advances in the application of chemometrics in several fields - Includes frank perspectives on what works well for the data of a certain

analytical instrument given the multiple choices of mathematical models and protocols that can be applied - Covered protocols are heavily illustrated with case studies showing their potential use and the advances in chemometrics

Pills, Powder, and Smoke Antony

Loewenstein,2019-08-21 Like the never-ending war on terror, the drugs war is a multi-billion-dollar industry that won't go down without a fight. Pills, Powder, and Smoke explains why. The war on drugs has been official American policy since the 1970s, with the UK, Europe, and much of the world following suit. It is at best a failed policy, according to bestselling author Antony Loewenstein. Its direct results have included mass incarceration in the US, extreme violence in different parts of the world, the backing of dictatorships, and surging drug addiction globally. And now the Trump administration is unleashing diplomatic and military forces against any softening of the conflict. Pills, Powder, and Smoke investigates the individuals, officials, activists, victims, DEA agents, and traffickers caught up in this deadly war. Travelling through the UK, the US, Australia, Honduras, the Philippines, and Guinea-Bissau, Loewenstein uncovers the secrets of the drug war, why it's so hard to end, and who is really profiting from it. In reporting on the frontlines across the globe — from the streets of London's King's Cross to the killing fields of Central America to major cocaine transit routes in West Africa — Loewenstein reveals how the war on drugs has become the most deadly war in modern times. Designed and inspired by Washington, its agenda has nothing to do with

ending drug use or addiction, but is all about controlling markets, territories, and people. Instead, Loewenstein argues, the legalisation and regulation of all drugs would be a much more realistic and humane approach. The evidence presented in this book will persuade many readers that he's right.

Externalism about Knowledge Luis R. G.

Oliveira,2023-08 Externalism about knowledge is thriving in contemporary epistemology. Nonetheless, externalism is too often caricatured as merely reliabilism, too often reduced to simply externalism about justification, and rarely considered as a cohesive family of related but importantly different views. Externalism About Knowledge addresses all of these issues by bringing new essays from leading externalist epistemologists working on seven different branches of this tradition: process reliabilism, tracking views, safety views, virtue epistemology, proper functionalism, naturalized epistemology, and knowledge first epistemology. This collection highlights their unity, their differences, their interconnections, and their most recent challenges, developments, and extensions.

Mark Antony Paolo de Ruggiero,2014-02-12 Mark Antony was embroiled in the tumultuous events of the mid-1st century BC, which saw the violent transformation from the Roman Republic to the Roman Empire. After being defeated by Augustus he has often been characterized by hostile historians as a loyal henchman of his uncle Julius Caesar but without the guile and vision to attain greatness in his own right (hence Shakespeare casts him as a 'plain, blunt man' whom Caesar's assassins don't think it worthwhile to

kill). In his infamous alliance and love affair with Cleopatra of Egypt he is also often seen as duped and manipulated by a sharper mind. Despite this there is no doubt Antony was a capable soldier. He first saw action leading a cavalry unit in Judaea, before giving valuable service to Julius Caesar in Gaul. He again served with distinction and led Caesar's right wing at the climactic battle of Pharsalus, and he was decisive in the defeat of the conspirators at Philippi which ended 100 years of Civil wars. But Paolo de Ruggiero re-assesses this pivotal figure, analyses the arguments of his many detractors, and concludes that he was much more than a simple soldier, revealing a more complex and significant man, and a decisive agent of change with a precise political vision for the Roman world.

We Need to Talk About Defence Andrew Curtis,2024-09-19 Based on a distinguished 35-year career in the RAF as an Air Commodore, Andrew R. Curtis highlights what is wrong with the way defence is managed today, and presents evidence-based proposals to fix it. Defence is failing to deliver. From the ability of the Ministry of Defence (MoD) to develop defence policy, to the single service's - Royal Navy, British Army, and Royal Air Force (RAF) - ability to acquire and maintain military capability, and undertake military operations. This is not a new problem; indeed, ever since the creation of the MoD in 1964, there have been tensions between the department of state and the armed forces over allocations of responsibility, authority and accountability. Concerned with political oversight; the allocation of responsibility, authority, and accountability; administration of people; organisational structures; and

policies and processes, Curtis compellingly demonstrates the critical need to reform the management of Defence for the UK's armed forces to fight and win in the future.
