The book's strength lies in its effective use of diagrams, spectra, and worked examples. Let's illustrate this with a case study:

Case Study: Structure Elucidation of an Unknown Compound

Imagine an unknown compound with the following spectral data:

Technique	Observation
^1H NMR	Singlet at δ 2.1 ppm (3H), multiplet at δ 7.2-7.5 ppm (5H)
^{13}C NMR	Peaks at δ 21 ppm (CH_3), δ 128, 129, 130, 135 ppm (aromatic carbons), δ 198 ppm (carbonyl)
IR	Strong absorption at 1700 cm^{-1}
MS	Molecular ion peak at m/z 134

Table 1: Spectral Data of Unknown Compound

Based on this data, the book would guide the reader through a systematic analysis:

IR: The strong absorption at 1700 cm^{-1} suggests a carbonyl group ($\text{C}=\text{O}$).

^1H NMR: The singlet at δ 2.1 ppm indicates a methyl group (CH_3) likely adjacent to the carbonyl group. The multiplet at δ 7.2-7.5 ppm indicates an aromatic ring (5H).

^{13}C NMR: Confirms the presence of a methyl group, aromatic carbons, and a carbonyl carbon, consistent with the other data.

MS: The molecular ion peak at m/z 134 gives the molecular weight.

Based on this combined analysis, the most likely structure is acetophenone:
